No application file

🚀 Get started with your gradio Space!

Your new space has been created, follow these steps to get started (or read the full documentation)

Start by cloning this repo by using:

HTTPS SSH Use an access token as git password/credential

```
# When prompted for a password, use an access token with write p iss
# Generate one from your settings: https://huggingface.co/settings/toke
git clone https://huggingface.co/spaces/Tejas876741/smart-traffic-ai
```

PowerShell uv uvx

```
# Make sure the hf CLI is installed
powershell -ExecutionPolicy ByPass -c "irm https://hf.co/cli/install.ps
```

```
# Download the Space
hf download Tejas876741/smart-traffic-ai --repo-type=space
```

Create your Gradio app.py file:

```
import gradio as gr

def greet(name):
    return "Hello " + name + "!!"

demo = gr.Interface(fn=greet, inputs="text", outputs="text")
demo.launch()
```

Then commit and push:

```
$ git add app.py
$ git commit -m "Add application file"
```

```
$ git push
```

> Hint Alternatively, you can **create the app.py** file directly in your browser.

Finally, your Space should be running on this page after a few moments!

Dependencies

You can add a `requirements.txt` file at the root of the repository to specify Python dependencies
If needed, you can also add a `packages.txt` file at the root of the repository to specify **Debian dependencies.**

The `gradio` package is pre-installed and its version is set in the `sdk_version` field in the `README.md` file.

Personalize your Space

Make your Space stand out by customizing its emoji, colors, and description by **editing metadata** in its `README.md` file.

Documentation

Read the full documentation for Gradio Spaces **here**.
